

DEPARTMENT OF DEFENCE - Electronic Warfare and Systems Division

Ross Human Directions has consultants working in several projects throughout the Defence Materiel Organisation (DMO) EWSD, including:

Air Command Support Systems (ACSS) Project, where our team is undertaking tasks related to:

- software integration and sustainment;
- developing requirements for Air Combat Support and Air Movements and Ground Defence;
- systems engineering, project management and systems analysis for the air operations and air mission planning; and
- integrated logistics support advice for all ACSS projects for transition to in-service support.

Joint Intelligence Support Systems (JISS) Project, where our team is undertaking tasks related to military geographic information systems in areas such as:

- development of technical specifications for applications and hardware;
- contract management of Defence prime contractors;
- project management of product installations; and
- project planning and scheduling.

Mine Warfare Command Support Systems (MWCSS) Project, where our team is involved in tasks related to combat and operational support systems such as:

- systems engineering management role to manage requirements and provide professional engineering guidance to Defence contractors; and
- acquisition and procurement advice for deployable minewarfare systems.

Command and Intelligence Systems Sustainment Office (CISSO), where our team is involved in tasks such as:

- systems management of command and control applications running on deployable systems, and the deployable hardware; and
- provision of integrated logistics management support.
